

PTFE PLAIN SLIDING BEARING

PTFE Plain Sliding Bearings is a flat surfaced bearing that accommodates movement by slip of one surface over another. It carries vertical load as well as horizontal forces and allows desired movement of the super structure. These bearings provide a very low coefficient of friction

PTFE Plain Sliding bearings are further categorized into two types based on its function - PTFE Sliding Free Bearings and PTFE Guided Bearings.

TYPE	PTFE Sliding Free Bearing	PTFE Guided Bearing
Load Bearing	Yes	Yes
Movement	In Both Direction	Only In One Direction
Rotation	No	No

PTFE Free Bearing

PTFE Guided Bearing
